

```

{
    // Place your área de trabajo de CIPCurso snippets here. Each snippet
    // is defined under a snippet name and has a scope, prefix, body and
    // description. Add comma separated ids of the languages where the
    // snippet is applicable in the scope field. If scope
    // is left empty or omitted, the snippet gets applied to all
    // languages. The prefix is what is
    // used to trigger the snippet and the body will be expanded and
    // inserted. Possible variables are:
    // $1, $2 for tab stops, $0 for the final cursor position, and
    // ${1:label}, ${2:another} for placeholders.
    // Placeholders with the same ids are connected.
    // Example:
    // "Print to console": {
    //   "scope": "javascript,typescript",
    //   "prefix": "log",
    //   "body": [
    //     "console.log('$1');",
    //     "$2"
    //   ],
    //   "description": "Log output to console"
    // }
    "inicio": {
        "scope": "html",
        "prefix": "mi",
