

```

{
    // Place your GLOBAL snippets here. Each snippet is defined under a snippet name and
    // has a scope, prefix, body and
    // description. Add comma separated ids of the languages where the snippet is
    // applicable in the scope field. If scope
    // is left empty or omitted, the snippet gets applied to all languages. The prefix is what
    // is used to trigger the snippet and the body will be expanded and inserted. Possible
    // variables are:
    // $1, $2 for tab stops, $0 for the final cursor position, and ${1:label}, ${2:another} for
    // placeholders.
    // Placeholders with the same ids are connected.
    // Example:
    // "Print to console": {
    //     "scope": "javascript,typescript",
    //     "prefix": "log",
    //     "body": [
    //         "console.log('$1');",
    //         "$2"
    //     ],
    //     "description": "Log output to console"
    // }
