```json
{
        // Place your GLOBAL snippets here. Each snippet is defined under a snippet name and
has a scope, prefix, body and
        // description. Add comma separated ids of the languages where the snippet is
applicable in the scope field. If scope
        // is left empty or omitted, the snippet gets applied to all languages. The prefix is what
is
        // used to trigger the snippet and the body will be expanded and inserted. Possible
variables are:
        // $1, $2 for tab stops, $0 for the final cursor position, and ${1:label}, ${2:another} for
placeholders.
        // Placeholders with the same ids are connected.
        // Example:
        // "Print to console": {
        //      "scope": "javascript,typescript",
        //      "prefix": "log",
        //      "body": [
        //              "console.log('$1');",
        //              "$2"
        //      ],
        //      "description": "Log output to console"
        // }
        "Base HTML5": {
                "scope": "html",
                "prefix": "ch_01",
                "body": [
